

Admin guide

For people who run a brand's loyalty programme in the admin panel: `tenant_admin` (one brand)

Open the panel at `https://<your-domain>/admin`. It works on a computer and on a phone.

Roles

	<code>tenant_admin</code>
Brands visible	Only their own
Users, redemptions, ledger, rewards	Yes, own brand
Branding, scan rules, points and voucher settings	Yes
OTP limits and MSG91 sender/template IDs	Read only
Create brands or admin accounts	No

A tenant admin cannot see or reach any other brand: another brand's pages and data simply do not exist for them.

Every change you make is recorded (who, when, what changed from and to, and your reason) in the audit log. There is no screen for the audit log yet .

Fulfil

Cancel

Cancel voucher P8P4-NPQ8-PU?

250 points will be refunded to Ravi Kumar.

Reason

Item out of stock at store

Cancel

Cancel and refund

Use when the customer has received the reward at the store. **Final**: it cannot be undone.

Use when the reward cannot be given. Needs a **reason**. The points go back to the user and the reward's stock goes up by 1.

The **Valid until** column shows when the voucher expires.

Save settings

Only the fields you change are saved and logged. Settings marked (*super admin only*) are read-only for tenant admins.

Group	Setting	Default	What it does
Branding	Brand name, Tagline	brand name, blank	Shown at the top of the app
	Logo URL	none	Image shown next to the name; without it, the brand's initials
	Colours b1 , b2 , soft	brand colours	b1 : dark main colour (hero, headings); b2 : accent (buttons, highlights); soft : page background
	Hero texture	none	wood adds a wood-grain pattern to the header
Users	Categories	—	The "I am a..." choices on the profile screen (1–10). A brand needs at least one before users can sign up.
Scan rules	Points per scan	10	Points each earning scan gives
	Cooldown (minutes)	10	Minimum gap between earning scans; 0 turns it off
	Daily scan cap	5	Earning scans per user (or anonymous phone) per IST day
Points and vouchers	Points expire after (days)	60	Life of each batch of points
	Pending points kept (days)	30	How long unclaimed anonymous points wait
	"Expiring soon" window (days)	7	How far ahead users are warned
	Voucher valid for (days)	30	Life of a new voucher
OTP limits *	Sends per phone / window	3 per 15 min	Anti-abuse limit on SMS codes
	Sends per IP / window	10 per 60 min	Same, per network address
Backend *	Sender ID, Template ID	server default	Per-brand SMS sender and template (blank = the platform default)

* super admin only.

Changes apply from now on. They never rewrite the past. See [Corner cases](#).

A super admin sees a brand selector at the top. Everything on screen then belongs to the selected brand.

How points are calculated

Reading the ledger

Every change to a user's points is one line in the ledger. Lines are never edited or deleted (the database refuses), so the ledger is the complete history.

Type	Sign	Written when
scan	+	A scan is credited (logged in), or pending scans are claimed at verify/profile
redeem	–	A user redeems a reward
refund	+	An admin cancels a voucher
adjust	+ or –	An admin adjusts points
expire	–	The nightly job records points that reached their expiry unused

Every **credit** (scan, refund, positive adjust) has its own **expiry date** = the day it was added + *Points expire after (days)*.

Every **debit** (redeem, expire, negative adjust) draws from specific credits. A redemption that needs points from three credits is written as three lines; the user's app shows it as one.

Balance

Balance = the unspent points of all credits whose expiry date has not passed.

- A credit stops counting at its exact expiry time, even before the nightly job writes the **expire** line.
- Nothing stores a balance; it is always calculated from the ledger, so it cannot drift.

Spending order

Redemptions and negative adjustments use the **oldest credits first** (by date added). Since all scans expire after the same number of days, this also uses the points closest to expiry first.

The nightly job

Every night at **00:30 India time** (`npm run expire`):

1. For each credit past its expiry with points left, it writes one **expire** line for exactly what is left.
2. It marks issued vouchers past their validity as **expired**.

It is safe to run again; it never expires the same points twice.

Worked example

A user's ledger (expiry 60 days):

Date	Line	Expires	Left on this credit
1 Jan	scan +10	2 Mar	10 → 0
5 Jan	scan +10	6 Mar	10 → 5
20 Jan	adjust +20 (goodwill)	20 Mar	20
1 Feb	redeem −15 (voucher)	—	takes 10 from 1 Jan, 5 from 5 Jan

- Balance on 1 Feb: $0 + 5 + 20 = 25$.
- On 3 Mar the 1 Jan credit has expired, but it was fully spent, so **nothing expires**; balance still 25.
- On 7 Mar the 5 Jan credit expires with 5 left: the job writes **expire** −5; balance **20**.
- If you **cancel** the 1 Feb voucher on 10 Feb: one **refund** +15 expiring 11 Apr; balance **40** on 10 Feb.

Corner cases

Settings changes

Change	Effect on existing data
Points per scan	Only new scans. Pending points keep the value they had when scanned.
Points expire after	Only new credits. Existing credits keep their expiry date.
Voucher valid for	Only new vouchers.
Cooldown / daily cap	From the next scan.
Pending points kept	Applies when pending points are claimed; shortening it can make older pending scans unclaimable.

Change	Effect on existing data
Categories	New profiles only; existing users keep their category, even if removed from the list.
Removing all categories	Not allowed. A brand with no categories cannot accept new sign-ups.
Colours, logo, name	Immediately in the app.

Redemptions and vouchers

- **Only issued vouchers can be fulfilled or cancelled.** *fulfilled*, *cancelled* and *expired* are final.
- **An expired voucher cannot be fulfilled** (the customer is too late) **and is not refunded.** It shows as expired as soon as its validity passes, even before the nightly job. If you want to be generous, **add the points back with an adjustment** and a reason.
- **Fulfilled by mistake?** It cannot be undone. If the customer did not get the reward, add the points back with an adjustment.
- **Cancelling refunds the points as a new credit with a fresh expiry** (60 days by default), not the original expiry dates.
- **Deactivating or restocking a reward** does not affect vouchers already issued for it.
- A user cannot redeem the same reward twice by double-tapping; each confirmation is one redemption.

Adjustments

- A negative adjustment **cannot take the balance below zero**; you get "The user does not have enough points". Check the balance first.
- Removing points takes them from the **oldest credits first**, which may be the ones about to expire.
- Added points expire like any credit (60 days by default).
- To **move points between users** (for example a customer's new phone number): remove from the old account, add to the new one, and give the same reason on both.

"Where are my points?"

The user says	Check	Likely cause
"I scanned but got nothing"	Ledger has no new <i>scan</i>	Scan was within 10 minutes of the last earning scan, or over the daily cap. Refused scans are recorded in the database (<i>scan_events</i>) but not in the ledger.
"My pending points didn't come"	Ledger after they verified	They verified on a different phone (pending points stay on the phone that scanned), or the pending scans were more than 30 days old, or that day's cap was already reached.
"My balance dropped"	<i>expire</i> or <i>adjust</i> lines	Points expired (60 days), or an admin adjusted them.
"My voucher doesn't work"	Redemptions, status	Expired (over 30 days) or already fulfilled.
"I have two accounts"	Search both numbers	Each phone number is a separate account; points are not shared. Move points with adjustments.

The user says	Check	Likely cause
"My number is registered with another brand"	—	Each brand has separate accounts. The same phone in two brands is two accounts.

Accounts and access

- **Locked out of the admin panel** after 5 wrong passwords: wait 15 minutes, or ask the platform owner to unlock it .
- **Forgotten password**: there is no reset screen yet; the platform owner can set a new one .
- **Removing an admin**: their session ends immediately when the account is deleted, but an admin who has made changes cannot be deleted (the audit log keeps them). .
- Users cannot be deleted or have their phone number changed in the panel.
- All dates are shown in India time.
