

User guide: earning and redeeming points

For the people who scan the QR code: carpenters, contractors and other customers of a brand on the platform. It explains every screen and exactly how points are counted. The screenshots show the "Demo Plywood" brand; your brand's name, colours and rewards will differ.

The numbers below (10 points per scan, 5 scans a day, and so on) are the default rules. Each brand can change them; the app always uses the brand's current rules.

In short

1. **Scan** the QR code printed on the product or at the shop. It opens a web page. No app to install, no login needed.
 2. Each scan earns **10 points**.
 3. **Verify your phone** once with an SMS code to keep your points.
 4. **Redeem** points for rewards and get a **voucher code** to show at the store.
-

The screens

1. Scan result

Scanning the QR opens the brand's page and records your scan straight away.

- **Not verified yet:** your points show as **pending**. They are saved on this phone for 30 days. Tap **Verify phone to claim** to keep them.
- **Already logged in:** the points go straight into your account (**+10 points added**), and **See my points** takes you to your points.
- Below, **Rewards you can earn** shows the brand's rewards. Swipe sideways to see them all.

Scanning again too soon, or too often in one day, is recorded but earns nothing:

Wait 10 minutes after a scan that earned points. The message says how long is left.

Up to 5 scans a day earn points. The count starts again at midnight (India time).

2. Verify your phone

DP

Demo Plywood

Trusted plywood for every build

Verify your phone

10 points waiting for you. We will send a 6-digit code by SMS.

Mobile number

+91

9876543210

Send code

1. Enter your 10-digit mobile number (the +91 is already there) and tap **Send code**.
2. You receive a 6-digit code by SMS. Enter it; the app checks it as soon as all 6 digits are in.

Wrong code. 4 attempts left.

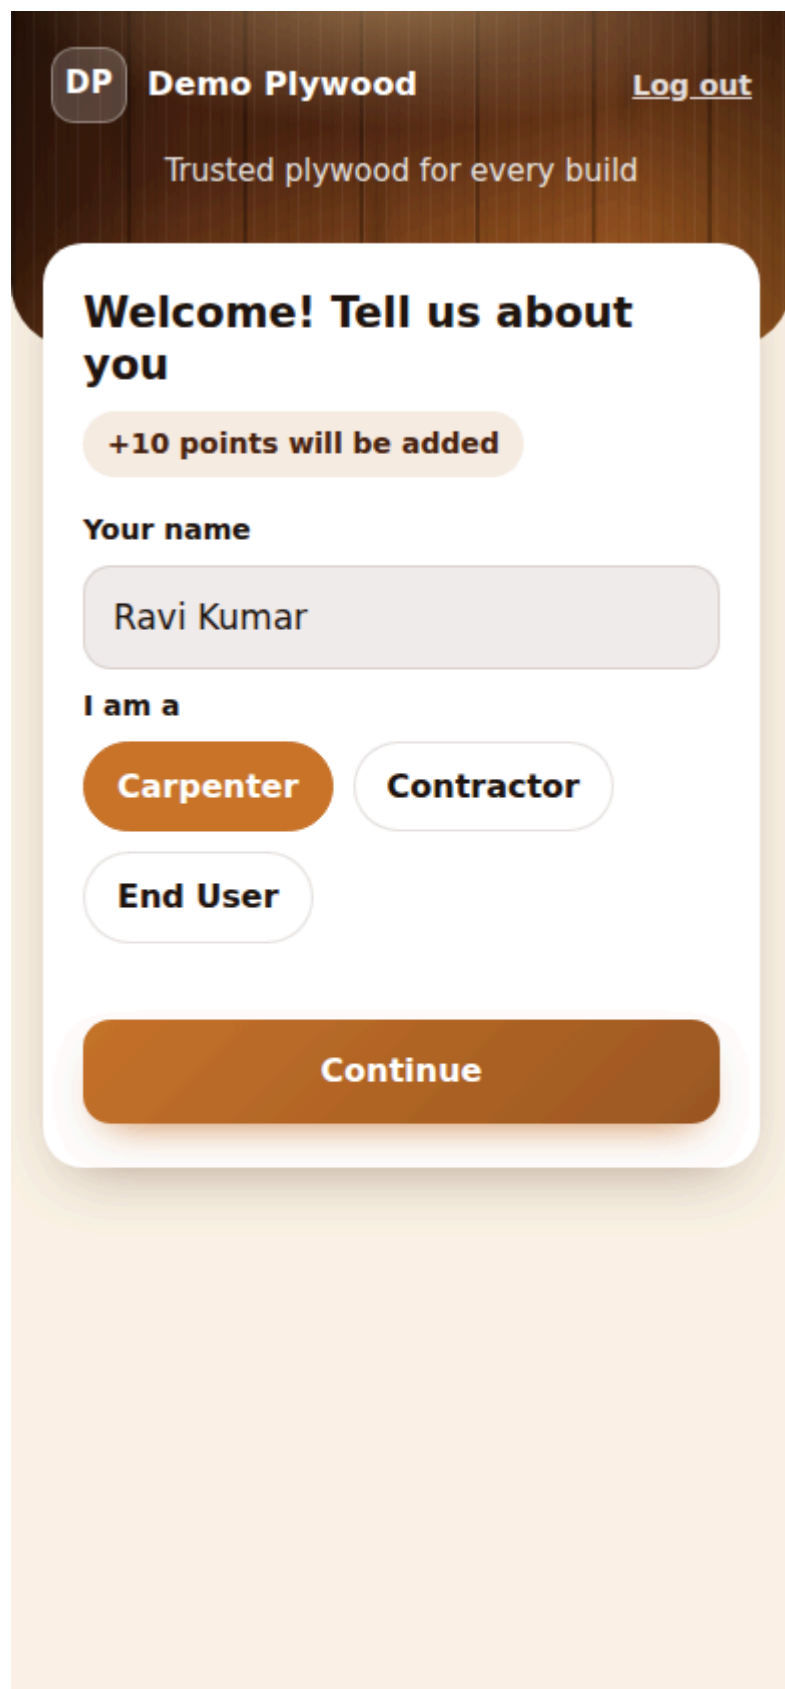

Verify

Resend code in 28s

- A wrong code shows how many tries are left. You get **5 tries per code**.
- A code works for **5 minutes**. After that, or after 5 wrong tries, tap **Resend code** (available 30 seconds after sending).
- You can request a code **3 times in 15 minutes**. After that, wait for the time shown.
- Wrong number? Tap **Change**.

You only do this once per phone: the app remembers you for 30 days, or until you tap **Log out**.

3. Create your profile (first time only)

The screenshot shows a mobile app interface for 'Demo Plywood'. At the top, there is a header with a circular profile picture placeholder labeled 'DP', the brand name 'Demo Plywood', and a 'Log out' link. Below the header is a tagline: 'Trusted plywood for every build'. The main content area is a white card with rounded corners. It starts with a bold heading 'Welcome! Tell us about you'. Below this, a light orange pill-shaped badge says '+10 points will be added'. Then, there is a label 'Your name' followed by a text input field containing 'Ravi Kumar'. Below that is a label 'I am a' followed by three selectable options: 'Carpenter' (highlighted with an orange background), 'Contractor' (white background with an orange border), and 'End User' (white background with an orange border). At the bottom of the card is a large orange button labeled 'Continue'.

Enter your name and choose what describes you (for example Carpenter, Contractor, End User; the brand sets the list). The note at the top shows the pending points that will be added. Tap **Continue**.

If your phone number is already registered with this brand, you skip this screen and go straight to your points; any pending points on this phone are added.

- **The ring** shows your balance in the middle. It fills up toward the cheapest reward you cannot afford yet; the line under it says how many more points you need, or how many rewards you can redeem now.
- **Expiring soon** (only shown when it applies): points that will expire in the next 7 days, by date. Redeem them before then.
- **Redeem rewards** opens the rewards.
- **Activity**: every change to your points, newest first:

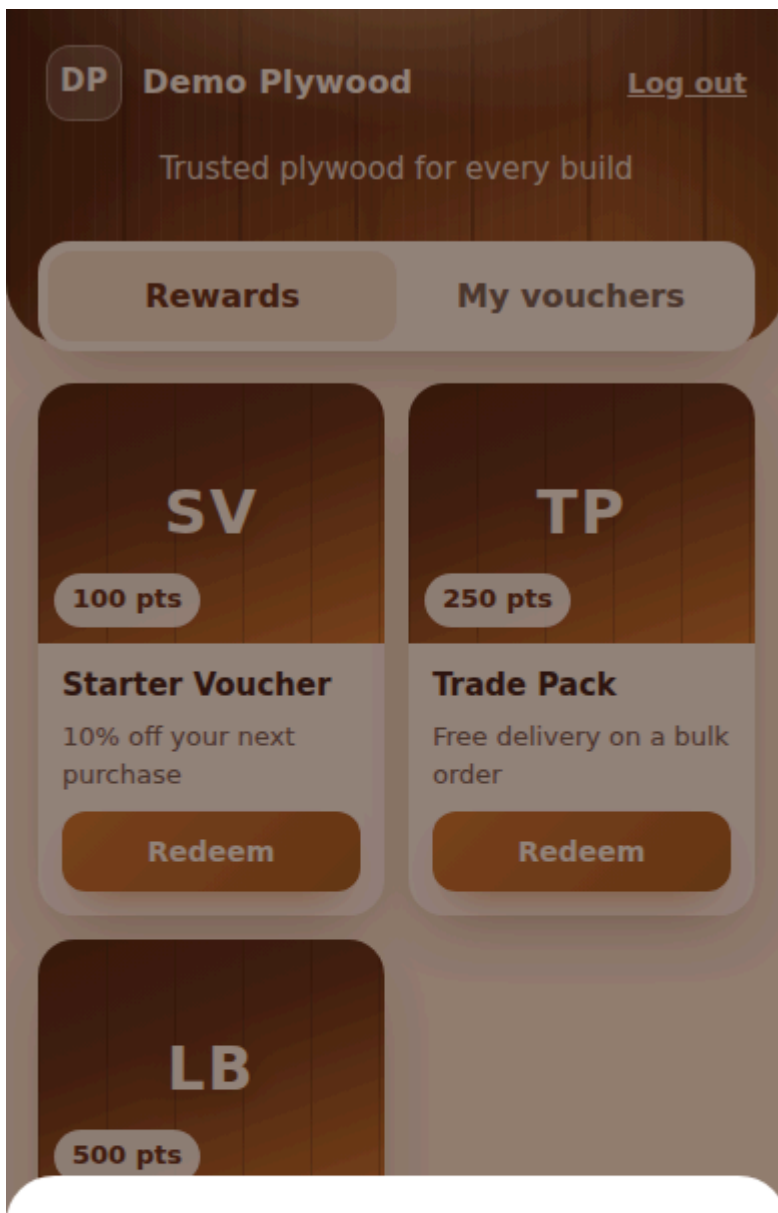

Entry	Meaning
+ Scan reward	Points from a scan
– Redeemed	Points used for a reward
↶ Voucher refund	Points returned because the brand cancelled a voucher
± Adjustment	Points added or removed by the brand (for example as a goodwill gesture or to correct a mistake)
× Points expired	Points that reached their expiry date unused

5. Rewards

- Each card shows the reward, its cost in points and a **Redeem** button.
- If you do not have enough points, the button says how many more you need (for example **Need 200 more**).
- **Out of stock** rewards cannot be redeemed until the brand restocks them.

Tapping **Redeem** asks you to confirm and shows what you will have left:

Redeem Trade Pack?

250 points will be used. You will have 50 left.

Redeem

Not now

Tapping **Redeem** twice, or a network problem, cannot charge you twice: the app sends one request per confirmation, and the server treats a repeat of it as the same redemption. If the connection drops, tap **Try again**.

Copy code

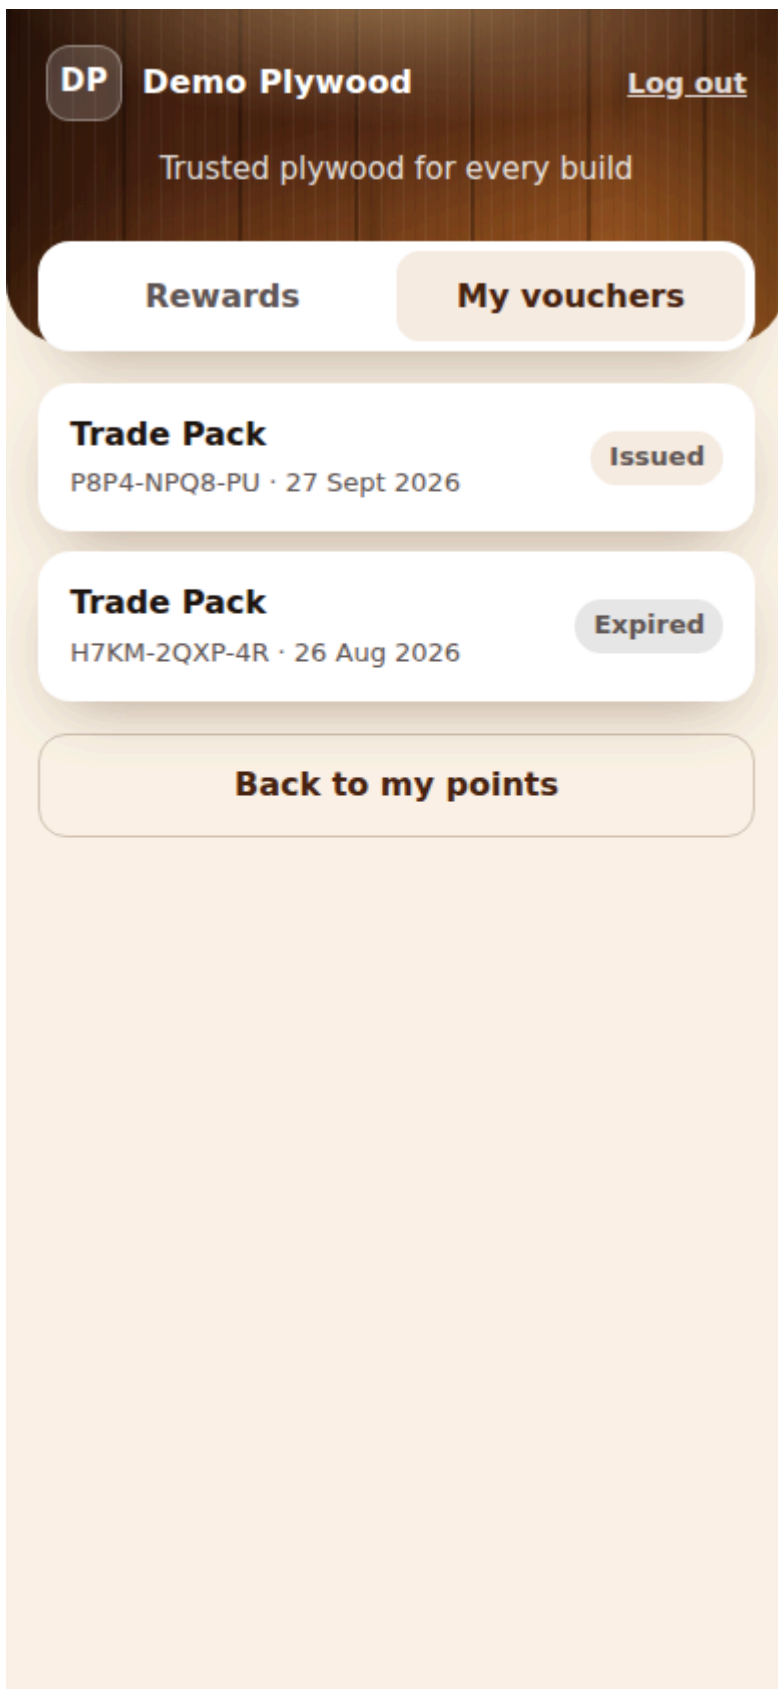

Valid until 27 Oct 2026

Show this code at the store to claim your
reward.

Back to my points

- The **voucher code** (like K7MQ-3XRD-9P) is what you show at the store. The code never contains the easily confused characters 0/O or 1/I.
- **Copy code** copies it to your phone.
- **Valid until**: the voucher can be used for 30 days.

7. My vouchers

On the rewards screen, **My vouchers** lists every voucher you have received. Tap one to see its code again.

Status	Meaning
Issued	Ready to use at the store
Fulfilled	Used; the store has given you the reward
Cancelled	Cancelled by the brand; your points were returned

Status	Meaning
Expired	Not used within its validity; the points are not returned

How points work

Earning

Rule	Default
Points per scan	10
Time you must wait after a scan that earned points	10 minutes
Scans that earn points per day	5 (a day runs midnight to midnight, India time)

- A scan that is too soon or over the daily limit is still recorded, but earns nothing and **does not restart** the 10-minute wait.
- The **daily limit** applies to **you** across all your phones: pending scans from another phone are checked against what you already earned that day when they are added.
- The **10-minute wait** applies per phone, and logging in on the same phone does not reset it.

Pending points (before you verify)

- Scans before you verify your phone are held as **pending** on that phone for **30 days**.
- They are added to your account when you verify (or create your profile) **on the same phone**.
- When they are added, the daily limit still applies to the day each scan happened. For example, if you already earned 5 scans on Monday on another phone, pending Monday scans from this phone cannot add more for Monday.
- Pending points not claimed within 30 days are lost.

Expiry

- **Every batch of points expires 60 days after it was added to your account.** Pending points count from the moment they are added (when you verify), not from the scan.
- Your balance only counts points that have not expired.
- The **Expiring soon** card warns you 7 days ahead.

Redeeming

- A reward costs a fixed number of points.
- Your **oldest points are used first**, which also uses up points closest to expiry first.
- A voucher is valid for **30 days**. After that it expires and the points are not returned.
- If the brand cancels your voucher (for example, the reward is out of stock at the store), the points come back as a new batch valid for another 60 days.

Worked example

Date	What happens	Balance
1 March, 10:00	Scan without logging in: +10 pending	0 (10 pending)
1 March, 10:04	Scan again: too soon, nothing earned	0 (10 pending)
1 March, 10:20	Verify phone, create profile: the pending 10 are added, expiring 30 April	10
1 March, 10:31 ... 13:00	4 more scans, each more than 10 minutes apart: +40	50
1 March, 15:00	6th scan of the day: daily limit, nothing earned	50
2 March ... 20 March	Regular scans earn 250 more	300
21 March	Redeem Trade Pack (250): the oldest 250 points are used	50
30 April	The last of the 1 March points expire, if still unspent	fewer

Common questions

I scanned but my points are not there. Check the message on the scan screen: it may have been too soon (10 minutes) or over the daily limit. If you scanned before verifying, verify on the **same phone** to claim them.

I changed phones. Scan on the new phone and verify with the same number; your points and vouchers are linked to your phone number, not the device. Pending points on the old phone stay there until you verify on it.

I got a new phone number. A new number is a new account. Ask the brand to move your points (they can adjust points in their admin panel).

My points disappeared. Points expire 60 days after they were added. Look for × **Points expired** in your activity.

The code didn't arrive. Wait a minute, check the number, then tap **Resend code**. After 3 codes in 15 minutes you need to wait.
